Airport Information Systems Market by Airport Size, Functions, Cost, & by Geography - Market Forecast & Analysis to 2014 - 2020

Sector Publishing Intelligence Limited (SPi) has been marketing business and market research reports from selected publishers for over five years. SPi offers a personal service to our customers with dedicated research managers who will work with you to source the best report for your needs. Based in the UK, SPi is well positioned to coordinate our customers' orders sourced from over 30 global report publishers.

We are pleased to present details of this report to assist your buying decision and administrative process. You will find easy-to-use *How To Buy* information on the last page of this document.

We look forward to being of service to you.

If you have bulk and/or recurring requirements, please get in touch - we can liaise with publishers to obtain sample pages and negotiate discounts on your behalf.

Airport Information Systems Market by Airport Size, Functions, Cost, & by Geography - Market Forecast & Analysis to 2014 - 2020

The global airport information systems market is estimated to be \$2,420.32 million in 2014 and is expected to register a CAGR of 4.76% to reach \$3,490.69 million by 2020.

The report provides a market analysis of the global airport information systems market, over the next five years. It contains the analysis of drivers, challenges, restraints, and burning issues that impact the industry. It also discusses the industrial value chain, porter's five force model, and technology trends that currently, prevail in the global airport information systems market.

It tracks, analyses, and lays out the market size of major aviation spenders in each region and provides the market share by airport size. It also analyses the market share by taking into account, the procurement, integration, and operational cost of the software.

It provides information on the leading competitors in the global airport information systems market along with, details on their financial positions, key products, their unique selling points, and key developments. This research report categorizes the global market on the basis of airport size, functions, and geographic regions, their forecasting revenues, market share, along with, analyzing the various trends in each of the sub sectors.

All the percentage shares, splits, and breakdowns were determined using secondary sources and verified through primary sources. All the possible parameters that affect the markets covered in this research study have been viewed in extensive detail, verified through primary research, and analysed to procure the final quantitative and qualitative data. This data is consolidated and added with detailed inputs and analysis from MarketsandMarkets, and is presented in this report.

The percentage split-ups of the segments categorized under the global market were used to arrive at the market sizes of each of the individual segments of the end-user verticals. The global airport information systems market has been classified by functions and geography. Thus, data was triangulated among four major categories based on their market sizes by functions, airport size, geography, and company revenue.

When it comes to spending their IT budgets, airports are giving priority to the passengers. According to a SITA survey, improving the passenger experience remains the single most important driving force for IT investments for 68% of airports, with reducing the cost of business operations, coming in second at 39%.

During the forecast period, Class A and Class B airports are expected to majorly invest in cloud services and Near Field Communications (NFC). Almost an equal proportion of airports expect to evaluate cloud services through pilot studies and the rest plan to consider NFC at their airports, during the forecast period.

SCOPE

This report categorizes the airport information systems market on the basis of airport size, function type, and cost; it also offers projected revenue of the global market.

- On the basis of airport size:

The global airport information systems market can be classified on the basis of Class A, Class B, Class C, and Class D airports depending upon the passenger traffic. It offers in-depth analysis of airport information systems market, with respect to the airport size.

- On the basis of function type:

The global airport information systems market is segmented into the type of functions performed such as airport operation control center (AOCC) and departure control system (DCS). DCS is further bifurcated into passenger tracking system, advanced passenger tracking system, and baggage handling system. The report provides the forecast analysis of functions of airport information systems from 2014-2020.

- On the basis of cost:

The airport information systems market is fragmented on the basis of operational cost, integration cost, and procurement cost. It also covers the cost incurred for the passenger and non-passenger software.

- On the basis of geography:

This report on the global airport information systems market covers regions such as North America, the Middle East, Asia-Pacific, Europe, and the Rest of the World.

Publisher Information :

MarketsAndMarkets (M&M) is a full service market research company and consulting firm that produces 400 high-level, strategically analyzed, full-length reports a year, tracking more than 10 industries. M&M plans to launch industry-wise and country-wise market tracker reports for all the verticals they track. This intelligence database comprising of about 400 reports a year, will form one of the world's largest business intelligence resources worldwide.

M&M has effectively used technology to automate the management of large and complex market data tables and forecasts. At M&M, they aspire to assist their clients to achieve sustainable growth by providing incisive business insight into their respective markets.
